About Me

Backend developer who enjoys building APIs and learning how systems fit together end to end. I'm comfortable picking up new tools and technologies as a project needs them, and I keep learning through hands-on projects rather than just theory. Still growing, but I genuinely like digging into problems and writing clean, working code that holds up.

Education

Bhakta Kavi Narsinh Mehta University (BKNMU) July 2023 – Apr 2026
Bachelor of Computer Application *CGPA: 8.02 / 10*

Projects

Quick-AI Feb 2026
React.js, Node.js, Express.js, PostgreSQL, Neon DB, Docker, Clerk, Gemini API

- Built an AI-powered content creation platform for generating articles, summaries, resumes, and images.
- Integrated Gemini API and Clerk authentication for user accounts and AI features.
- Stored app data in PostgreSQL (Neon DB) and containerized the whole app with Docker for consistent deployment.

NestJS Microservices System Aug 2026
NestJS, RabbitMQ, MongoDB, Elasticsearch, Cloudinary, Clerk, Docker

- Built a modular microservices backend (Gateway, Catalog, Search, Media) with NestJS.
- Secured the API Gateway using Clerk JWT and used RabbitMQ for service-to-service messaging.
- Integrated Elasticsearch for fast search and Cloudinary for image uploads.

JoinEazy — Student & Assignment Management Sept 2026
React.js, Node.js, Express.js, PostgreSQL (Neon), JWT, LangChain, Pinecone, Docker, Swagger

- Full-stack platform for managing students, groups, and assignments with role-based access for admins and students.
- Added an assignment-specific AI assistant (LangChain + Pinecone) that indexes assignments and answers questions using their content.
- Documented APIs with Swagger and set up Docker Compose for consistent local and deployed environments.

Experience

Backend Developer — Onarc (Web3 Platform) Sept 2026
MSMindLabs, Remote

- Built a production-ready backend indexer for Onarc, a Web3 platform that tracks token launches, liquidity pools, and trading activity on the Arc blockchain.
- Implemented the indexer to listen to on-chain events, process them in batches, and store structured data in PostgreSQL.
- Built the REST API layer to serve indexed data to the frontend, and connected it to the UI for real-time token feeds.
- Handled unreliable RPC endpoints using retries, fallbacks, and adaptive batch sizes to keep indexing stable.

Full Stack Developer Intern Dec 2025 – Feb 2026
Depple, Remote Internship

- Developed full-stack web applications using MERN; designed RESTful APIs with Node.js and Express.
- Managed MongoDB databases and built responsive React.js interfaces.

Technical Skills

- **Languages:** C, Java, JavaScript, TypeScript, SQL
- **Backend:** Node.js, Express.js, NestJS, Spring Boot, REST APIs, Swagger, Prisma, viem.js
- **Concepts:** System Design, Event-Driven Architecture, Caching, RBAC
- **Messaging:** RabbitMQ, Kafka
- **Databases:** MongoDB, PostgreSQL, Redis, Neon DB, Vector DB (Pinecone)
- **Cloud & DevOps:** AWS, Docker, Docker Compose, GitHub Actions, CI/CD
- **Tools & AI:** Git, GitHub, LangChain, LanGraph, RAG, LLM Integration, MCP, Claude, Vercel, Render
- **Frontend:** React.js, Vite, Tailwind CSS, Framer Motion, Shadcn UI, Clerk

Achievements

- **Coding Practice:** Solved 100+ coding challenges across online platforms.
- **Coder Army:** Earned a Generative AI certification covering LLMs and prompt engineering.
- **Git & GitHub:** Completed certification with practical version control experience.
